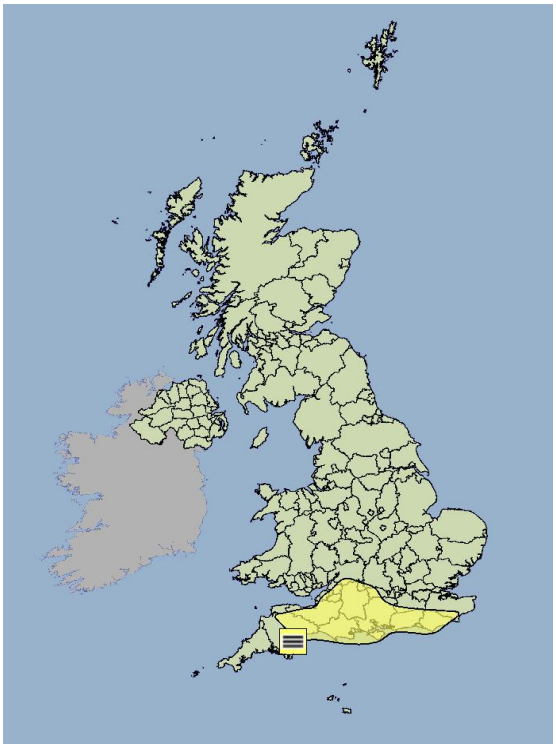
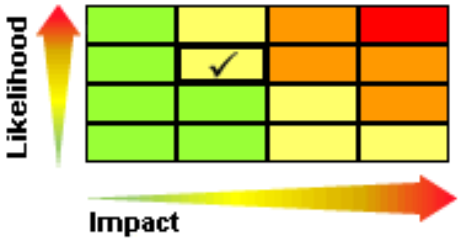
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
Light winds and moist air, together with clear skies, brings the likelihood of fog formation later this afternoon and through the evening. Fog is likely to form earliest across parts of low-lying Devon and Somerset (where it has locally persisted today), then further north and east this evening, affecting some other counties of southern England.

Overnight, low cloud is expected to arrive from the southwest and should lift most of the fog towards hilly areas by Monday morning.

The Met Office have issued a **Yellow Warning** of **Fog**

Valid from **16:00 on Sun, 11th Dec 2016** until **23:55 on Sun, 11th Dec 2016**

Fog patches, which have locally persisted through today, are likely to become more extensive this evening and dense in places. Not everywhere will see fog, but where it does form, visibility may fall below 100 metres. Be prepared for some disruption to transport and difficult driving conditions.

The fog will mostly lift to be focussed on high ground by Monday morning.
